Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

#### 1. GENERAL INFORMATION

#### 1.1 Product Description for Equipment under Test

This device is a 433.92MHz transmitter which is powered by DC 12V alkaline battery. For more details features, please refer to User's Manual.

Manufacturer& Factory : Guangzhou Qi Ao Auto exhaust System Co., Ltd

Address : 20 Zhenhua North Road, Shenshan Industrial

Park, Jianggao Town, Baiyun District, Guangzhou,

China

Frequency: : 433.92MHz

Modulation : ASK

Antenna Type : PCB

Antenna Gain : -2.1dBi

Number of Channels : 1

Power supply : DC 12V alkaline Battery

Hardware : 1.0

Software : 1.0

Model name : VK0102-KIT

Model difference : None

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

#### 1.2 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: **2AJJEVK0102KIT** filing to comply with Section 15.231 of the FCC Part 15 (2016), Subpart C Rule.

#### 1.3 Test Methodology

The radiated emission measurement was performed according to the procedures in ANSI C63.10 (2013). Radiated emission measurement was performed in semi-anechoic chamber. For radiated emission measurement, preliminary scans were performed in the semi-anechoic chamber only to determine the worst case modes. All radiated tests were performed at an antenna to EUT distance of 3 meters.

#### 1.4 Equipment Modifications

Not available for this EUT intended for grant.

#### 1.5 Support Device

None

#### 1.6 Test Facility and Location

Listed by FCC, July 03, 2014 The Certificate Registration Number is 665078. Listed by Industry Canada, June 18, 2014 The Certificate Registration Number is 9743A.

Dongguan NTC Co., Ltd. (Full Name: Dongguan Nore Testing Center Co., Ltd.)

Building D, Gaosheng Science and Technology Park, Hongtu Road, Nancheng District, Dongguan City, Guangdong, China (Full Name: Building D, Gaosheng Science & Technology Park, Zhouxi Longxi Road, Nancheng District, Dongguan, Guangdong, China.

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

#### 1.7 Summary of Test Results

| FCC Rules      | Description Of Test         | Result         |  |
|----------------|-----------------------------|----------------|--|
| §15.207        | AC Power Conducted Emission | N/A see note 2 |  |
| §15.231&15.209 | Radiated Emission           | Compliant      |  |
| §15.231(c)     | Occupied bandwidth          | Compliant      |  |
| §15.231(a)     | Transmission time           | Compliant      |  |
| §15.203        | Antenna Requirement         | Compliant      |  |

- Note: 1. The EUT has been tested as an independent unit. And Continual transmitting in maximum power (The new battery be used during test)
  - 2. Due to this EUT is powered by battery only, the AC Power Conducted Emission is not applicable.
  - 3. The EUT powered by battery and operating multiple positions, so the EUT shall be performed three orthogonal planes. The worst plane is Z.
  - 4. The EUT could transmitting by each button, so the EUT shall be performed for each button, the worst case is button "A". And it is worst case for duty cycle.

Example:

X Plane

Y Plane

Z Plane

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

# 2. Radiated Emission Test

## 2.1 Test SET-UP (Block Diagram of Configuration)

(1) Radiated Emission Test Set-Up, Frequency Below 30MHz

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

## (2) Radiated Emission Test Set-Up, Frequency above 1GHz

#### 2.2 Measurement Procedure

- a. Blow 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi- anechoic chamber room.
- b. For the radiated emission test above 1GHz:
  - The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter full anechoic chamber room. The table was rotated 360 degrees to determine the position of the highest radiation. Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.
- c. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- d. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- e. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to peak detect function and specified bandwidth with maximum hold mode.
- f. A Quasi-peak measurement was then made for that frequency point for below 1GHz test. PK and AV for above 1GHz emission test.

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

During the radiated emission test, the spectrum analyzer was set with the following configurations:

| Frequency Band<br>(MHz) | Level   | Resolution Bandwidth | Video Bandwidth |
|-------------------------|---------|----------------------|-----------------|
| 30 to 1000              | QP      | 120 kHz              | 300 kHz         |
| Above 1000              | Peak    | 1 MHz                | 3 MHz           |
| Above 1000              | Average | Peak+ AV Factor      |                 |

#### 2.3 Limit

Table A [0.009MHz~1GHz]

| Frequency range | Distance Meters | Field Strengths Limit (15.209) |
|-----------------|-----------------|--------------------------------|
| MHz             |                 | μV/m                           |
| 0.009 ~ 0.490   | 300             | 2400/F(kHz)                    |
| 0.490 ~ 1.705   | 30              | 24000/F(kHz)                   |
| 1.705 ~ 30      | 30              | 30                             |
| 30 ~ 88         | 3               | 100                            |
| 88 ~ 216        | 3               | 150                            |
| 216 ~ 960       | 3               | 200                            |
| Above 960       | 3               | 500                            |

Remark : (1) Emission level (dB) $\mu$ V = 20 log Emission level  $\mu$ V/m

- (2) The smaller limit shall apply at the cross point between two frequency bands.
- (3) As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.
- (4) The frequency range scanned is from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or 40 GHz, whichever is lower.

#### Table B

| Fundamental Frequency | Field Str<br>Funda |             | Field Strength of Spurious Emissions |             |  |
|-----------------------|--------------------|-------------|--------------------------------------|-------------|--|
| (MHz)                 | μ <b>V/m</b>       | dBμV/m      | μ <b>V/m</b>                         | dBμV/m      |  |
| 40.66-40.70           | 2250               | 67.04       | 225                                  | 47.04       |  |
| 70-130                | 1250               | 61.94       | 125                                  | 41.94       |  |
| 130-174               | 1250-3370**        | 61.9-70.55  | 125-375**                            | 41.94-51.48 |  |
| 174-260               | 3750               | 71.48       | 375                                  | 51.48       |  |
| 260-470               | 3750-12500**       | 71.48-81.94 | 375-1250**                           | 51.48-61.94 |  |
| Above 470             | 12500              | 81.94       | 1250                                 | 61.94       |  |

#### 2.4 Measurement Results

#### For Spurious Emission.

Frequency range: 9KHz~1GHz

Operation Mode: TX

Test Result: PASS Temperature : 22  $^{\circ}$ C Measured Distance: 3m Humidity : 54  $^{\circ}$ 6 Test Date : July 28, 2016 Test By: Anson

| Freq.    | Ant.Pol. | Reading | Factor | Emission | Limit    | Margin | Note |
|----------|----------|---------|--------|----------|----------|--------|------|
|          |          | Level   |        | Level    | 3m       |        |      |
| (MHz)    | H/V      | (dBuV)  | (dB/m) | (dBuV/m) | (dBuV/m) | (dB)   |      |
| 664.3799 | V        | 26.65   | -4.78  | 21.87    | 46.00    | -24.13 | QP   |
| 774.9600 | V        | 26.83   | -2.26  | 24.57    | 46.00    | -21.43 | QP   |
|          |          |         |        |          |          |        |      |
| 612.0000 | Н        | 28.16   | -5.03  | 23.13    | 46.00    | -22.87 | QP   |
| 737.1299 | Н        | 26.99   | -2.89  | 24.10    | 46.00    | -21.90 | QP   |
|          |          |         |        |          |          |        |      |

Other emissions are lower than 20dB below the allowable limit. And according to FCC rule, they had not recorded in the report.

Note: (1) Emission Level= Reading Level + Factor

- (2) Factor= Antenna Gain + Cable Loss Amplifier Gain
- (3) Measurement uncertainty: ±3.4dB
- (4) Loop antenna used for the emission below 30MHz.
- (5) Data of measurement within this frequency range shown " --- " in the table above means the reading of emissions are attenuated more than 10dB below the permissible limits.

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

Other emissions are lower than 20dB below the allowable limit. And according to FCC rule, they had not recorded in the report.

Note: (1) Emission Level= Reading Level+Probe Factor +Cable Loss

- (2) Factor= Antenna Gain + Cable Loss Amplifier Gain
- (3) Measurement uncertainty: ±3.7dB
- (4) Emission (the row indicated by bold) within the restricted band meets the requirement of FCC part 15 Section 15.205.
- (5) Horn antenna used for the emission over 1000MHz.

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

## **For Duty Cycle**

Average should be determined by duty cycle factor. The duty cycle is simply the on time by divided by the period: The duration of one cycle = 38.30ms <100ms

Effective period of the cycle = Ton1\*Number+Ton2\*Number =0.29\*21+0.87\*4=9.57ms

Duty cycle =9.57ms / 38.30ms =0.2499ms

#### AV Factor=20log0.2499= -12.05

The value of Average= The value of Peak+AV Factor.

Example: For 433.92MHz, AV=65.83 (Peak)-12.05(AV factor)=53.78 Details please see the following plots.

# 3. Occupied Bandwidth

#### 3.1 Measurement Procedure

Same as section 2.2.

#### 3.2 Test SET-UP (Block Diagram of Configuration)

Same as section 2.1.

#### 3.3 Limit

Please refer section 15.231

According to 15.231(C), the bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70MHz and below 900MHz.

Limit = 433.92\*0.25% = 1.08 MHz

#### 3.4 Measurement Results

| 20dB Bandwidth | Limit   |  |
|----------------|---------|--|
| 67.31KHz       | 1.08MHz |  |

Please refer to the following plot.

### 4 Transmission Time

#### **4.1 Measurement Procedure**

Same as section 2.2.

#### 4.2 Test SET-UP (Block Diagram of Configuration)

Same as section 2.1.

#### 4.3 Limit

According to 15.231(a)(1), A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

#### 4.4 Measurement Results

| Transmission Time | Limit |
|-------------------|-------|
| 336.5ms           | 5s    |

Please refer to the following plot.

Report No.: NTC1607161F FCC ID: 2AJJEVK0102KIT

## 5. Antenna Application

#### **5.1 Antenna requirement**

According to of FCC part 15C section 15.203 and 15.240:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### **5.2 Measurement Results**

The antenna is integrated on the main PCB and no consideration of replacement, and the best case gain of the antenna is -2.1dBi. So, the antenna is consider meet the requirement.
